

EdReady Montana is a Math readiness tool available to all Montana college and university students who need developmental math assistance. Interested colleges and universities can work with the Montana Digital Academy (MTDA) to use existing assessments or set up custom options for students to assess their math readiness for a variety of educational goals. A few of those options are listed below. If you have other goals in mind or want to discuss how to get set up, contact the staff at MTDA.

EdReady is best utilized as a program to support a school’s existing developmental mathematics assistance programs. It is not a full “course” where teaching services are supplied by MTDA. It is a supplemental online computer assessment and personalized learning path curriculum that our staff will help you apply to your program to ease the transition from developmental math to college or university level math.

EdReady Montana helps remove barriers to success for Montana college and university students:

For students: It’s February, and you want to go to school next year but don’t know where or what to study. EdReady helps you know if you are ready to go to any Montana college or university.

For colleges: (community, tribal, private and public) EdReady Montana can quickly be aligned to any math placement test.

For parents of college students: EdReady curriculum has been correlated with tremendous success rates in **actual** university math classes last summer, so credit-bearing options that apply to a degree (**NOT** remedial math that students pay for but get no credit) become the goal.

For veterans, non-traditional students and out-of-state students: Use EdReady Montana (for free) if you need to "catch up" with individual work to meet math proficiency expectations in Montana colleges over the summer or prior to coming to campus.

By using EdReady Montana: Families save money, and students progress toward degree completion faster.

Higher Education Assessments
M105 Readiness
