

# South Campus Primary Electrical Distribution Upgrades

MR-33

Montana State University

Project Cost: \$1,750,000

## Long Range Building Plan Request

The project will expand critically needed electrical infrastructure in the South Campus District. The project will expand service and increase continuity and redundancy for the campus community.

## Existing Condition

- The South Campus District has limited infrastructure and availability.
- The existing infrastructure is not able to accommodate increased electrical load.

## Benefit to MSU

- Increased continuity and redundancy.
- Support of increased electrical loads.
- Increase electrical capacity and ensure reliability for the campus community.
